

COLOSSEUM • CONSUMER TRACK

Every little makes a mickle.

\$1 a day into the S&P 500. On Solana. Global. On-chain.
Watch what consistency actually compounds into.

THE PROBLEM

The most boring trade in finance is locked away from billions.

I tried to set up a \$1 a day DCA into the S&P 500 for someone in my family. Robinhood doesn't open accounts in their country. eToro's spread ate the dollar. UK ISAs are tax wrappers, not a product. There is no Web2 path to fractional S&P at \$1, globally, 24/7.

WHY NOW

Three rails matured in the last 12 months.

01 • ASSET

Tokenized SPY went live

Backed Finance's SPYx trades 24/7 on Solana under EU prospectus. The S&P 500 became a programmable token.

02 •
ONBOARDING

Email → Solana wallet, 5s

Privy ships embedded Solana wallets keyed to email. No seed phrase. No app store. No KYC for \$1.

03 • MONEY

USDC matured globally

Stablecoins are now regulated, liquid, and free to move. A dollar from Lagos to Solana costs nothing.

THE SOLUTION

One tap. One dollar. Every day you show up.

01

Sign in with email

A Solana wallet
appears in 5
seconds. No seed
phrase.

02

Tap once a day for \$1

Treasury batches
USDC and routes
through Jupiter into
SPYx.

03

Watch consistency compound

Live Time Machine.
A streak. A daily
parable. The
opposite of degen.

WHY ON-CHAIN

Web2 cannot ship this. We tried.

ROBINHOOD / ETORO / ISAS

- ✗ Country lock-outs (60+ markets)
- ✗ Spreads eat \$1 deposits
- ✗ Market hours only
- ✗ Streak = vendor-locked badge
- ✗ AUM gating, account minimums

MICKLE ON SOLANA

- ✓ Permissionless — email is enough
- ✓ Stablecoin in, fractional SPYx out
- ✓ 24/7 ritual, 24/7 settlement
- ✓ Streak = soulbound NFT, composable
- ✓ Float yield + 0.99% fee, no token economics

THE STACK

Five primitives. One ritual.
